

Any type of restriction of XM Instant Traffic & Weather must be prevented. When I travel I can use XM to find a clear station to learn if there is any hazardous weather or traffic problems in the area. I hear the information without stupid local comments and commercials of info I am not interested in. What is next I can not tell my neighbor of a problem if I hear it on other than Xm. If they wish to compete upgrade their services and I am sure people would listen. Try driving in an area where radio reception is nonexistent or fading in and out except for XM seeing dark dangerous clouds ahead and trying to find out what type weather and which way is it going. Try a traffic jam in a town where the radio stations are doing everything but giving traffic advisories and you are not familiar so how do we avoid this problem? Please reject NAB petition 04-160 give the american public the freedom to choose. Thank You Wanda Mabe
